

Part 02

2. What's Enum data type, when is it used? And name three common built_in enums used frequently?

- Enum is used to make code more **readable, type-safe, and easier to maintain** when dealing with a fixed set of choices.

3- what are scenarios to use string Vs StringBuilder?

- **Use string when:**
 - The text does not change frequently.
 - You are doing a small number of concatenations.
 - You need a simple, readable way to store text.
- **Use StringBuilder when:**
 - You need to modify text frequently.
 - You are concatenating strings inside a **loop**.
 - You are working with **large amounts of text**.
 - Performance and memory efficiency are important.
